# eCommerce Supplier Portal

ProfitKey's eCommerce Supplier Portal enhances communications with your suppliers, facilitates timely adjustment of delivery schedules, minimizes manual expediting, and improve supplier performance.

SUPPLIER PORTAL DATABASE

- Generates separate portal database independent of your live ERP database.
- Frequency of update to database is user definable.
- Portal Database maintains snapshot of portal information available for your Supplier to view including:
  - o Actual & planned material requirements to all who are preferred suppliers.
  - o Current open orders, on-hand inventory, delivery schedules, and current Invoice status.
- Enables controlled supplier modifications of:
- Delivery schedules against PO line items.
- Supplier modifications must be approved by your buyer before they are automatically updated into your ERP database.
- Automatic Email notification to Supplier when new requirements exist.
- Simplifies management of material for dynamic production environment

- Eliminates need for costly expediting calls to supplier and paper-based inventory reports
- Enables your company to be more responsive to ever changing material planning requirements

SUPPLIER PORTAL ADMINISTRATION

- Easy Administration of Supplier Login
- Setup by Supplier and Item
- Customizable Supplier WEB Page
- Customizable Scrolling messages

INTERNET ENVIRONMENT

- Portal WEB Server
- Requires Windows 2003 Server with IIS
- Requires ODBC Access to both Live and Snapshot Databases
- Utilizes the Active Server Pages (ASP)
- Non-dialup connection to Internet required, ie T1/3, Cable, DSL
- Domain Name or IP address required to access to Supplier Portal Web Server
